London Basel Sofia

# The Company

OVER 10 YEARS OF EXPERIENCE IN DIGITAL HEALTH

At **BGO software** we make health digital by empowering our customers to deliver their digital health products and solutions through our premium services.

## Our history

Started as a boutique IT company in 2008, in less than 3 years we grew to become a leading IT company with 100+ employees, serving clients from around the globe across several verticals. After more than 12 years of experience within the healthcare industry, we set our main direction. Today, **BGO Software** is the **digital health lab** that aims to improve and **save lives today through technology**.

## Our expertise & services

We have extensive background in the development of clinical research systems, eHealth solutions (web and mobile health applications) and GMP validated systems for pharmaceutical & biotech companies.

## Our people

Our culture is defined by our people. We are an innovation team that values mutual trust, creativity, systems thinking, agility, and adaptability. We are creating a movement in the IT industry so that more people choose the professional path towards saving and improving lives through technology.

## Job Description

An automation tester is someone who designs and implements technological processes to automate various tasks. They combine their strong understanding of different technology applications, coding and software development tools to streamline and improve systems and processes. Automation testers are responsible for testing, troubleshooting and analysing design systems to ensure everything runs smoothly. They may also be responsible for performing routine maintenance and upgrades. An automation tester's goal is to ensure every process runs as efficiently as possible while delivery consistent, high-quality output.

## ESSENTIAL SKILLS

Good knowledge in SQL and experience with DB platforms

Autonomous with using version control tools (Git/GitHub)

Experience with different bug tracking systems (JIRA, Azure DevOps, Zephyr, TestRail, Test Link or similar)

Experience with Test automation frameworks (Playwright, Protractor, Selenium, Webdriverlo, Codeceptjs, Cypress)

Very good understanding and hands-on experience of OOP principles, software architecture and technologies, etc.

You have a deep understanding of how web, RESTful, event-driven applications work in a microservices environment

You can read any high-level language such as TS/JS  
Good knowledge of JavaScript, HTML, XML, REST

Experience of working within an Agile environment  
Understanding of the Software Development Life Cycle

## RESPONSIBILITIES

Work closely with development, business analysts, and product owners to ensure project success

Communicate frequently with expert personnel and subject matter experts

Supports knowledge management and collaboration through participation in testing discussions, communities and improving testing collateral through lessons learned

Participates actively as a member of Agile development team working with product owner and wider development teams to sustain the overall quality of the product  
Interacts with the Product team to gain understanding of the business environment, technical context, and conformance criteria

Design, create and execute automated tests

Manually performs tests that can't be automated or will be automated later

Uses various testing techniques to verify features and fixes are correctly implemented

Gets familiar with feature requirements and provides feedback on them

The ability and desire to learn new technologies and successfully adopt all company training  
Be familiar with all BGO Automation Processes and BGO QA Processes

Report and track software defects
